

AI System to Automatically Review and Summarize Research Papers – Milestone 3

Statement of Purpose

The objective of Milestone 3 is to implement an automated draft generation module using GPT-based models. This phase focuses on generating structured research sections such as Abstract, Methods, and Results by synthesizing insights extracted from multiple research papers. The system ensures logical flow, academic tone, and proper structure suitable for scholarly review.

Scope of Project

This milestone includes automated section generation using structured prompts, multi-paper findings synthesis, and APA-style reference formatting. The module prepares a coherent, well-organized draft ready for review and refinement.

Detailed Methodology

- Step 1: Integrated GPT-based model for automated academic draft generation.
- Step 2: Designed structured prompts for Abstract, Methods, and Results sections.
- Step 3: Implemented synthesis logic to combine findings from multiple research papers.
- Step 4: Generated coherent and structured research drafts with academic consistency.
- Step 5: Developed APA-style citation and reference formatting module.
- Step 6: Reviewed drafts for clarity, completeness, and logical flow.

Week 5–6 Implementation Tasks

- Automated section draft generation using GPT models.
- Structured writing for Abstract, Methods, and Results.
- Multi-paper findings synthesis implementation.
- APA reference formatting integration.
- Draft validation and refinement process.

System Flow Explanation

1. Start – System begins execution.
2. Load Structured Extracted Data.
3. Generate Abstract using GPT model.
4. Generate Methods Section.
5. Generate Results Section.
6. Synthesize Multi-Paper Findings.
7. Format References in APA Style.
8. Draft Review and Refinement.
9. Stop – Final structured draft is produced.
